

**Amendments to the Claims**

This listing of claims will replace all prior versions and listings of claims in this application.

Listing of Claims

1-28. (canceled)

29. (new) A method of resolving conflicts for series recordings, the method comprising:

receiving a user indication to schedule shows of a plurality of series for recording;

assigning each series a different recording priority;

determining that a scheduled recording of a first show in a first series conflicts with a second show that is scheduled for recording;

canceling the scheduled recording of the first show based on a first recording priority assigned to the first series;

displaying a first interface screen comprising a plurality of listings of programs that are scheduled for recording;

displaying, in the first interface screen, a first indication that the scheduled recording of the first show has been canceled;

receiving, through a single keystroke by a user, a user selection to switch from the first interface screen to a

second interface screen, wherein the second interface screen indicates the recording priorities assigned to the plurality of series; and

receiving a user request, through the second interface screen, to increase the first recording priority assigned to the first series such that the scheduled recording of the first show is no longer canceled.

30. (new) The method of claim 29, wherein the second show is in a second series, and wherein canceling the scheduled recording of the first show comprises:

determining that the first recording priority assigned to the first series is lower than a second recording priority assigned to the second show; and

canceling the scheduled recording of the first show in response to the determining.

31. (new) The method of claim 29, further comprising:

canceling the scheduled recording for the second show in response to the increase of the first recording priority assigned to the first series.

32. (new) The method of claim 31, further comprising:

receiving, through another single keystroke by the user, a user selection to switch from the second interface screen back to the first interface screen;

displaying the first interface screen comprising the plurality of listings of the programs that are scheduled for recording; and

displaying, in the first interface screen, a second indication that the scheduled recording of the second show has been canceled.

33. (new) The method of claim 29, wherein displaying the first indication comprises:

displaying a no-record icon with a listing for the first show.

34. (new) The method of claim 29, further comprising:

displaying a first icon and a second icon with the first interface screen;

associating the first icon with the first interface screen; and

associating the second icon with the second interface screen, wherein receiving the user selection to switch from the first interface screen to the second interface screen comprises receiving a user selection of the second icon.

35. (new) The method of claim 34, further comprising:

maintaining the display of the first icon and the second icon when the second interface screen is displayed.

36. (new) The method of claim 34, further comprising:

receiving a user selection of the first icon;  
and

switching from the second interface screen to the first interface screen in response to receiving the user selection of the first icon.

37. (new) The method of claim 29, further comprising:

displaying, in the second interface screen, a list of the plurality of series with shows scheduled for recording, wherein an order of the list indicates a relative recording priority of each series.

38. (new) The method of claim 37, wherein receiving the user request to increase the first recording priority assigned to the first series comprises:

receiving a user indication of the first series from the list; and

receiving a user request to change a relative position of the first series in the list.

39. (new) The method of claim 29, further comprising:

receiving, through a single keystroke by the user, a user selection to switch from the first interface screen or the second interface screen to a third interface

screen, wherein the third interface screen comprises a plurality of listings of recorded programs.

40. (new) The method of claim 39, further comprising:

displaying a visual indication of an estimated time until at least one of the recorded programs will be deleted.

41. (new) Apparatus for resolving conflicts for series recordings, the apparatus comprising:

a user input device;  
a display device; and  
control circuitry configured to:

receive a user indication from the user input device to schedule shows of a plurality of series for recording;

assign each series a different recording priority;

determine that a scheduled recording of a first show in a first series conflicts with a second show that is scheduled for recording;

cancel the scheduled recording of the first show based on a first recording priority assigned to the first series;

display, on the display device, a first interface screen comprising a plurality of listings of programs that are scheduled for recording;

display, in the first interface screen, a first indication that the scheduled recording of the first show has been canceled;

receive, through a single keystroke on the user input device, a user selection to switch from the first interface screen to a second interface screen, wherein the second interface screen indicates the recording priorities assigned to the plurality of series; and

receive a user request, from the user input device, to increase the first recording priority assigned to the first series such that the scheduled recording of the first show is no longer canceled.

42. (new) The apparatus of claim 41, wherein the second show is in a second series, and wherein the control circuitry is further configured to:

determine that the first recording priority assigned to the first series is lower than a second recording priority assigned to the second show; and

cancel the scheduled recording of the first show in response to the determining.

43. (new) The apparatus of claim 41, wherein the control circuitry is further configured to:

cancel the scheduled recording for the second show in response to the increase of the first recording priority assigned to the first series.

44. (new) The apparatus of claim 43, wherein the control circuitry is further configured to:

receive, through another single keystroke on the user input device, a user selection to switch from the second interface screen back to the first interface screen;

display, on the display device, the first interface screen comprising the plurality of listings of the programs that are scheduled for recording; and

display, in the first interface screen, a second indication that the scheduled recording of the second show has been canceled.

45. (new) The apparatus of claim 41, wherein the first indication comprises a no-record icon displayed with a listing for the first show.

46. (new) The apparatus of claim 41, wherein the control circuitry is further configured to:

display a first icon and a second icon with the first interface screen;

associate the first icon with the first interface screen;

associate the second icon with the second interface screen;

receive, from the user input device, a user selection of the second icon; and

display the second interface screen in response to receiving the user selection of the second icon.

47. (new) The apparatus of claim 46, wherein the control circuitry is further configured to:

maintain the display of the first icon and the second icon when the second interface screen is displayed.

48. (new) The apparatus of claim 46, wherein the control circuitry is further configured to:

receive, from the user input device, a user selection of the first icon; and

display the first interface screen in response to receiving the user selection of the first icon.

49. (new) The apparatus of claim 41, wherein the control circuitry is further configured to:

display, in the second interface screen, a list of the plurality of series with shows scheduled for recording, wherein an order of the list indicates a relative recording priority of each series.

50. (new) The apparatus of claim 49, wherein the control circuitry is further configured to:

receive, from the user input device, a user indication of the first series from the list; and

receive, from the user input device, a user request to change a relative position of the first series in the list.

51. (new) The apparatus of claim 41, wherein the control circuitry is further configured to:

receive, through a single keystroke on the user input device, a user selection to switch from the first interface screen or the second interface screen to a third interface screen, wherein the third interface screen comprises a plurality of listings of recorded programs.

52. (new) The apparatus of claim 51, wherein the control circuitry is further configured to:

display a visual indication of an estimated time until at least one of the recorded programs will be deleted.
